Many patients ask themselves, "Do I have plantar fasciitis?" Many patients assume they have plantar fasciitis as it is a fairly well-known condition. In today's video I talk to you about the plantar fascia, an important structure that supports the arch of the foot. The plantar fascia is a thick band of tissue that runs along the bottom of the foot, connecting the heel bone to the base of the toes. It is responsible for supporting the arch of the foot and absorbing shock during walking and running. A sprain of the plantar fascia can cause pain and swelling in the heel and arch of the foot. There are three different types of plantar fasciitis: acute, chronic, and atrophic. The styloid process is a bony protrusion located on the outside of the fifth metatarsal bone in the foot.
